Attention: Mr. W. F. Desmond

Dear Sir:

We have delayed answering your letter of Feb. 25th with regard to the application for the Adjustall Non Backflo Fitting. Our delay has been occasioned by the fact that we want to make one more laboratory test effecting some of the claims. This will be done within the next 10 days to two weeks.

We note that you have made no specific mention of the function of the Y Connection. It is true that this connection has no relationship to the swivel adjustable principles mentioned, but we do think that the Y Fitting itself accomplishes a very important function - that of none back flow. Heretofore none back flow has been accomplished by means of interior partitions, which are objectionable from many standpoints, foremost of which is the fact that they become stopped up during use. Would it not be possible in some way to work in claims for the Y Fitting?

With best regards, we are

Yours truly,

M.C.Frost/VL
